Informed Consent for the use of Bone Regenerative Procedures

Diagnosis: After a careful oral examination and study of my dental condition, Dr. Conway has advised me that I have periodontal disease. I understand that periodontal disease weakens support of my teeth by separating the gum from the teeth. The pockets caused by this separation allow for greater accumulation of bacteria under the gum in hard-to-clean areas and can result in further erosion or loss of bone and gum supporting the roots of my teeth. If untreated, periodontal disease can cause me to lose my teeth and can have other adverse consequences.

Recommended Treatment: In order to treat this condition, Dr. Conway has recommended that my treatment include *bone regenerative surgery*. I understand that sedation may be utilized and that a local anesthetic will be administered to me as part of the treatment. I further understand that antibiotics and other substances may be applied to the roots of my teeth.

During this procedure, my gum will be opened to permit better access to the roots and to the eroded bone. Inflamed and infected gum tissue will be removed, and the root surfaces will be thoroughly cleaned. Bone irregularities may be reshaped.

Graft material will be placed in the areas of bone loss around the teeth. Various types of graft materials may be used. These materials may include my own bone, synthetic bone substitutes, or bone obtained from a tissue bank (allografts). Membranes may be used with or without graft material – depending on the type of bone defect present. My gum will be sutured back into position, and a periodontal bandage may be placed.

I further understand that unforeseen conditions may call for a modification or change from the anticipated surgical plan. These may include, but are not limited to (1) extraction of hopeless teeth to enhance healing of adjacent teeth, (2) the removal of a hopeless root of a multi-rooted tooth so as to preserve the tooth, or (3) termination of the procedure prior to completion of all the surgery originally outlined.

Expected Benefits: The purpose of *bone regenerative surgery* is to reduce infection and inflammation and to restore my gum and bone to the extent possible. The surgery is intended to help me keep my teeth in the operated areas and to make my oral hygiene more effective. It should also enable professionals to better clean my teeth. The use of bone, bone graft material, or the placement of a membrane is intended to enhance bone and gum healing.

Principal Risks and Complications: I understand that some patients do not respond successfully to bone regenerative procedures and, in such cases, the involved teeth may be lost. The procedure may not be successful in preserving function or appearance. Because each patient's condition is unique, long-term success may not occur.

I understand that complications may result from the periodontal surgery with bone regeneration, drugs, or anesthetics. These complications include, but are not limited to post-surgical

infections, bleeding, swelling, and pain, facial discoloration, transient but on occasion permanent numbness of the jaw, lip, tongue, teeth, chin or gum, jaw joint injuries or associated muscle spasm, transient but on occasion permanent increased tooth looseness, tooth sensitivity to hot, cold, sweet or acidic foods, shrinkage of the gum upon healing resulting in elongation of some teeth and greater spaces between some teeth, cracking or bruising of the corners of the mouth, restricted ability to open the mouth for several days or weeks, impact on speech, allergic reactions, and accidental swallowing of foreign matter. In the event that donated tissue is used for the graft, the tissue should have been tested for hepatitis, syphilis, and other infectious diseases. Nevertheless, there is a remote possibility that tests will not determine the presence of such diseases in a particular donor tissue. The exact duration of any complications cannot be determined, and they may be irreversible.

There is no method that will accurately predict or evaluate how my gum and bone will heal. I understand that there may be a need for a second procedure if the initial surgery is not satisfactory. In addition, the success of bone regenerative procedures can be affected by medical conditions, dietary and nutritional problems, smoking, alcohol consumption, clenching and grinding of teeth, inadequate oral hygiene, and medication that I may have been taking. To my knowledge I have reported to Dr. Conway any prior drug reactions, allergies, diseases, symptoms, habits, or conditions, which might in any way relate to this surgical procedure. I understand that my diligence in providing the personal daily care recommended by Dr. Conway and taking all prescribed medications are important to the ultimate success of the procedure.

Alternatives to Suggested Treatment: Alternatives to periodontal surgery with *bone regenerative surgery* include (1) no treatment – with the expectation of possible advancement of my condition which may result in premature loss of teeth, (2) extraction of a tooth or teeth involved with periodontal disease, (3) non-surgical scraping of tooth roots and lining of the gum (scaling and root planing), with or without medication, in an attempt to further reduce bacteria and tartar under the gumline – with the expectation that this may not fully eliminate deep bacteria and tartar, may not reduce gum pockets, which require more frequent professional care and time commitment, and may result in the worsening of my condition and the premature loss of teeth.

Necessary Follow-Up Care and Self Care: I understand that it is important for me to **continue to see my regular dentist.** Existing restorative dentistry can be an important factor in the success or failure of periodontal therapy. From time to time, Dr. Conway may make recommendations for the placement of restorations, the replacement of existing restorations or their modification, the joining together of two or more of my teeth, the extraction of one or more teeth, the performance of root canal therapy, or the movement of one, several, or all of my teeth. I understand that the failure to follow such recommendations could lead to ill effects, which would become my sole responsibility.

I recognize that natural teeth and appliances should be maintained daily in a clean, hygienic manner. I will need to come for appointments following my surgery so that my healing may be monitored and so that the periodontist can evaluate and report on the outcome of surgery upon completion of healing. Smoking or alcohol intake may adversely affect gum healing and my

limit the successful outcome of my surgery. I know that it is important (1) to abide by the specific prescriptions and instructions given by Dr. Conway and (2) to see Dr. Conway and my dentist for periodic examination and preventive treatment. Maintenance also may include adjustment of prosthetic appliances.

No Warranty or Guarantee: I hereby acknowledge that no guarantee, warranty or assurance has been given to me that the proposed treatment will be successful. In most cases, the treatment should provide benefit in reducing the cause of my condition and should produce healing which will help me keep my teeth. Due to individual patient differences, however, a periodontist cannot predict the absolute certainty of success. There exists the risk of failure, relapse, additional treatment, or worsening of my present condition, including the possible loss of certain teeth, despite the best of care.

Publication of Records: I authorize photos, slides, x-rays or any other viewing of my care and treatment during or after its completion to be used for the advancement of dentistry and for reimbursement purposes. My identity will not be revealed to the general public, however, without my permission.
